# Data Warehouse Modernization Project Summary Update

*- The ETL, Data Warehouse and Data Catalog Project is initiated.*

Key findings and challenges identified during the initial phase of the project, including data source complexity and integration requirements.

*and currently - Issued a KFP seeking a technology platform to leverage our data assets across disparate and siloed data systems, and to also modernize the University's overall data ecosystem.*

Key findings and challenges identified during the initial phase of the project, including data source complexity and integration requirements.

*Second quarter - Completion of the KFP with potential selection of a Data Warehouse and Data Catalog solution.*

Key findings and challenges identified during the initial phase of the project, including data source complexity and integration requirements.

**And beyond**  
Potential expansion to additional integrations and systems.
